Subject: 5 Part forms

To whom it may concern,

I feel that the 5 part forms are outdated and that non-regulated drug testing has made leaps and bounds using technology to their advantage. I feel that technology should be used or at least allowed for regulated drug testing. Although the 5 part form has its place in the onsite and post-accident scene, regularly scheduled tests done in offices nation wide would benefit from using a computerized system. I use a computerized collection system everyday for non-regulated drug screens and I feel that it reduces errors and is more efficient than filling out the information by hand.

I look forward to hearing what decisions are made regarding this leap forward for regulated tests.

Thank you,
