Having reviewed the new CCF form and being aware of the possibility of a national Positive Database, we were hoping the new CCF would have a ID field for the CDL number, Pilot license number, driver license number. Having this verifiable data on a CCF would help with the implementation of the Database that MRO Offices would be able to report to and employer search.

It would also circumvent the occasional donor that provides a false SSN number. Collectors would be required to insert the data from the donor's id, thereby proving that the ID was checked as well.
